

VIEWPOINT REVIEW: THE POWER OF ONE

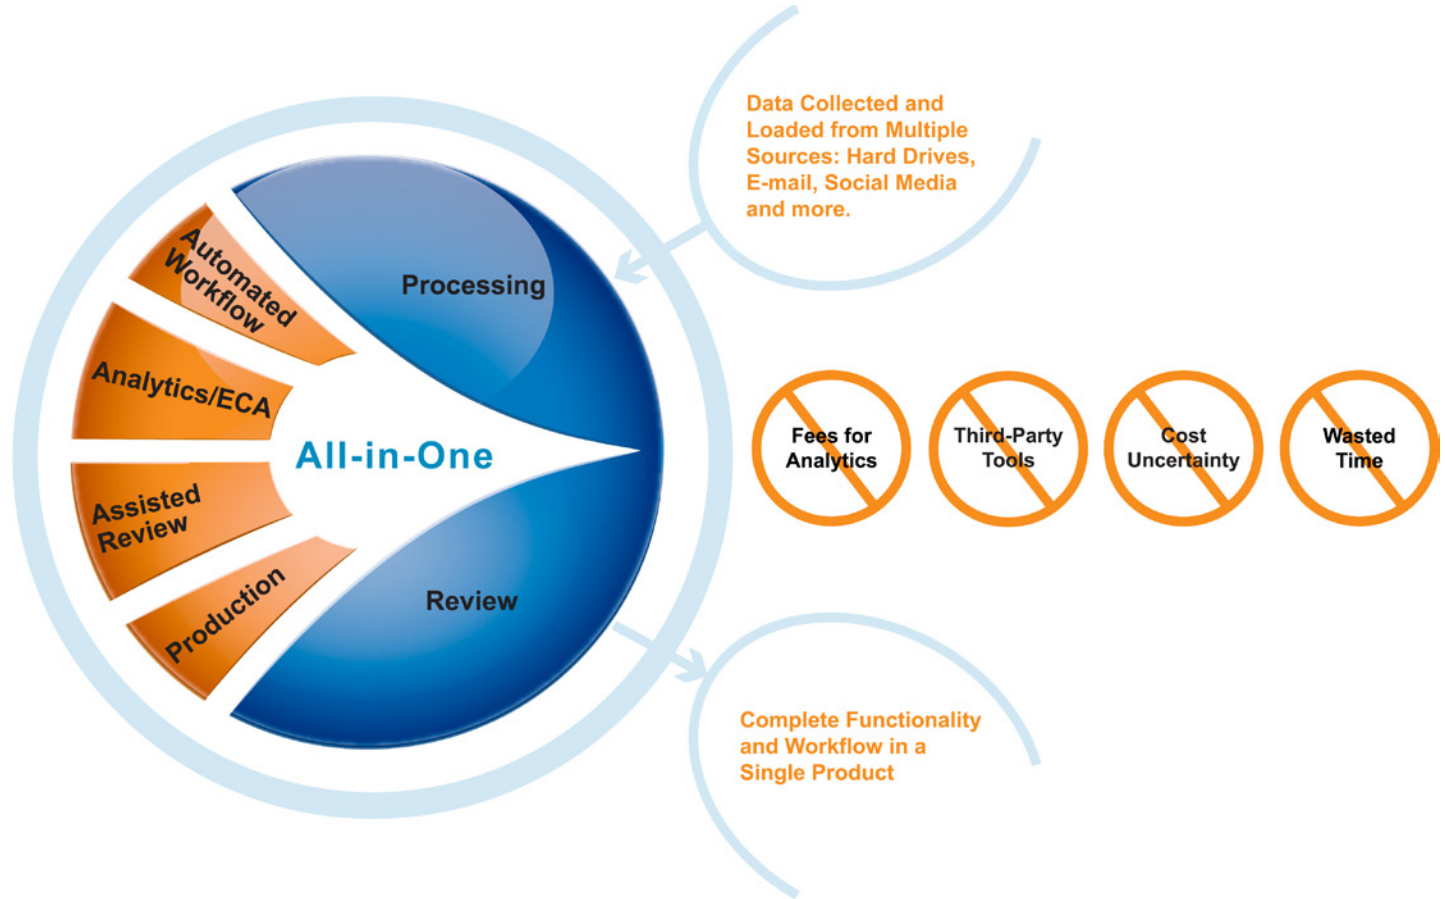

Viewpoint™ is an all-inclusive e-Discovery platform that covers the core components of the Electronic Discovery Reference Model, including Collection, Early Case Assessment, Processing, Analysis, Review and Production. By fully integrating all of these tools into one product, Viewpoint delivers complete functionality, streamlined workflow, robust features and analytics to all users throughout the project. All from one product.

Viewpoint’s document review module offers speed, simplicity and key features that allow reviewers to work quickly and effectively. Viewpoint has the ability to scale to meet the needs of every level of user. Basic traditional review options are available for users who need fast, simple access to reviewing documents. Users who require more advanced tools, analytics and functionality may configure their screen, options and features to meet their needs. Both maximize productivity tailored to the users’ needs and capabilities.

Because it is part of Viewpoint’s all-in-one platform, Viewpoint Review delivers some distinct advantages that no competitor can match, including:

VIEWPOINT FEATURE	VALUE
Advanced traditional review	Leverage simple and fast access to documents with enhanced efficiency and speed
Integrated processing capabilities	Post 100,000 documents for review in under 5 minutes and avoid time-consuming imports/exports
Automated workflow management	Automate complex work flow requirements to route documents to specific users
Analytics are fully integrated and included with the base product	Always-on analytics are included with no add-on charges or hidden costs
All software components are developed by one company	No reliance on third-party applications or royalty fee payments
Ability to customize layout	Novice or advanced users can have it their way
One repository	All documents are fully indexed and searchable in one system
All-in-one architecture	Processing, de-duplication, searching, redacting, productions – all in one place, all in one product

VIEWPOINT ALL-IN-ONE E-DISCOVERY PLATFORM

WHAT CLIENTS ARE SAYING ABOUT VIEWPOINT REVIEW

One of the things we like best about Viewpoint is that it maintains both native formats and parent/child relationships. Viewpoint can examine anything you can view with the human eye—e-mails, charts, spreadsheets, photos—without converting them to TIFFs or other digital common denominators. That saves a lot of processing and review time. With the volume of data growing exponentially—we currently have over 100 terabytes of data hosted by Viewpoint—speed is incredibly important.

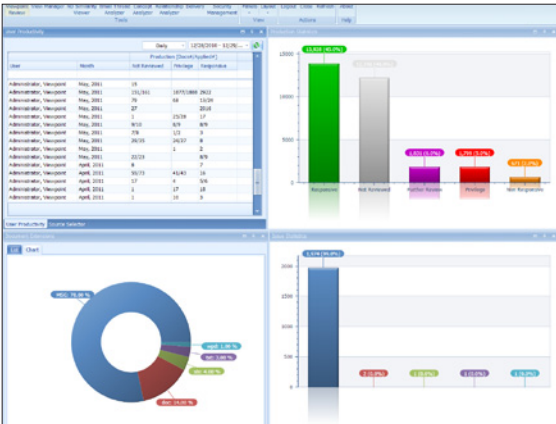

– Brad Bonnington, Practice Support Manager, Fenwick & West LLP

The firm's selection of Viewpoint reflects attorneys' desire for an intuitive user interface combined with the latest analytical features. We were looking for a platform that would not only serve us well during routine document review projects, but that would also provide advanced functionality to enable us to efficiently locate the most relevant documents in a case. We expect that Viewpoint will provide our attorneys with a state-of-the-art tool for searching and understanding our litigation documents.

– Brendan Schulman, E-Discovery Counsel, Kramer Levin Naftalis & Frankel LLP

Viewpoint™ Review facilitates the functions of basic traditional review, while also providing a fully integrated suite of advanced analytics, filtering, machine assisted review, near-duplicate analysis, conceptual analysis, e-mail redundancy and e-mail thread management as well as the ability to graphically display e-mail communication analysis.

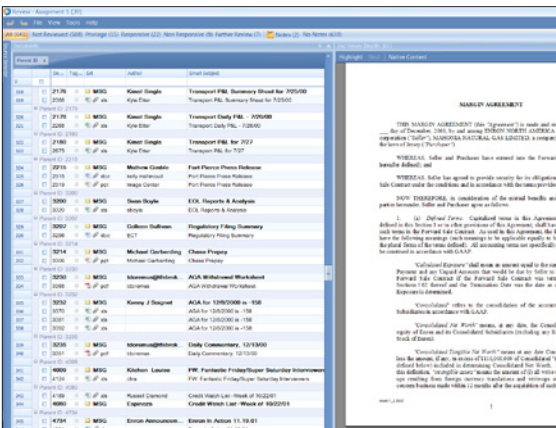

ANALYTICS

Viewpoint Review includes the following Analytics:

- Viewpoint Assisted Review
- Near-Duplicate Identification and Side-by-Side Similarity Viewer
- Conceptual Analysis
- E-mail Relationship Analysis
- E-mail Thread Analysis
- E-mail Suppression

TRADITIONAL REVIEW

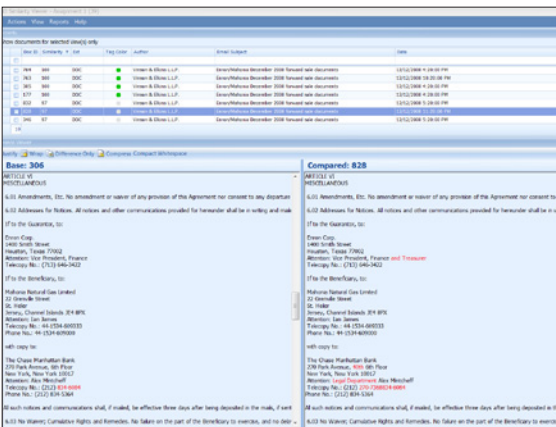

For a traditional approach, users want simple, basic functionality. Point – click – tag – next. Basic.

Viewpoint’s primary interface allows for a user to select a “view” based upon search terms, custodians, concepts, dates or any other type of filter or criteria available and then review each item linearly by navigating the documents “grid.”

The Document Control Grid contains a simple method of organizing, filtering and sorting data so e-mail messages, attachments and all files are grouped however the user desires, producing an accurate and complete set of documents for faster review.

The simple “drag and drop” interface resembles Microsoft Outlook and provides the user with this very familiar and simple environment.

NEAR-DUPLICATE IDENTIFICATION & VIEWER

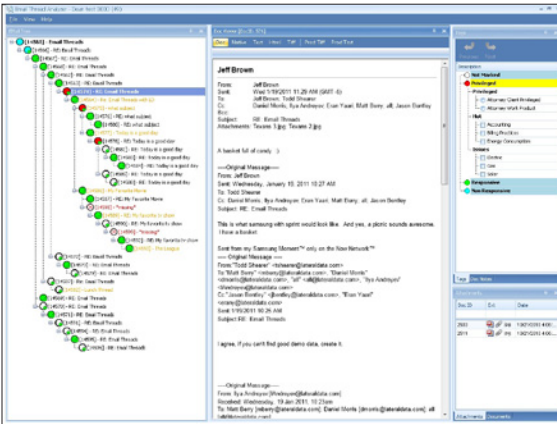

Lateral Data’s proprietary near-duplicate identification technology groups documents (attachments, e-mails and loose files) into a “near-duplicate family,” facilitating a faster review by enabling users to review all near-duplicates together at one time.

Large groups of documents may be tagged individually or across the entire near-duplicate family to improve consistency and efficiency.

Viewpoint Review also provides a “differences only” option, which removes common text and speeds through documents much faster.

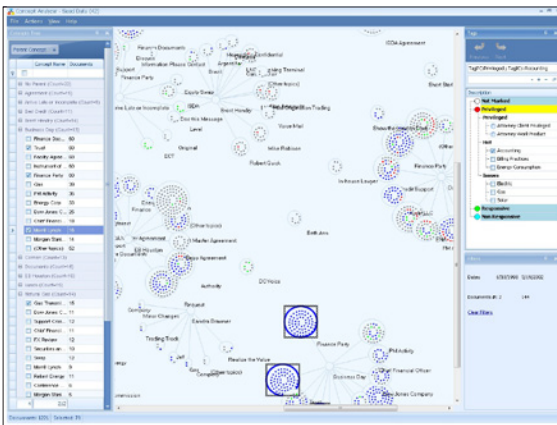

E-MAIL THREAD ANALYZER

Viewpoint™ Review's E-mail Thread Analyzer helps reviewers to identify, group, review and tag the entire thread of an e-mail at once, identifying inconsistencies in the e-mail threads:

- See the entire thread at once.
- Identify when the subject matter changes.
- Identify when text is missing from subsequent e-mails.
- Identify when an e-mail is missing from the thread.
- Identify when users are added or removed from the distribution list.

CONCEPT ANALYZER

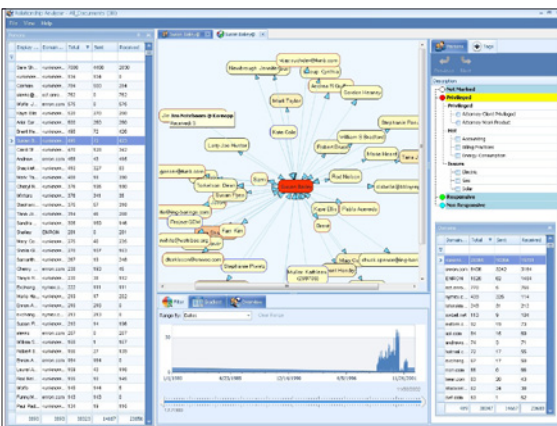

By using Viewpoint's built-in Concept Analyzer, legal teams are able to quickly understand case facts and identify important concepts.

This feature takes advantage of sophisticated concept clustering to help prioritize critical documents early.

A user-friendly workflow allows legal teams to leverage the power of conceptual analysis with minimal training.

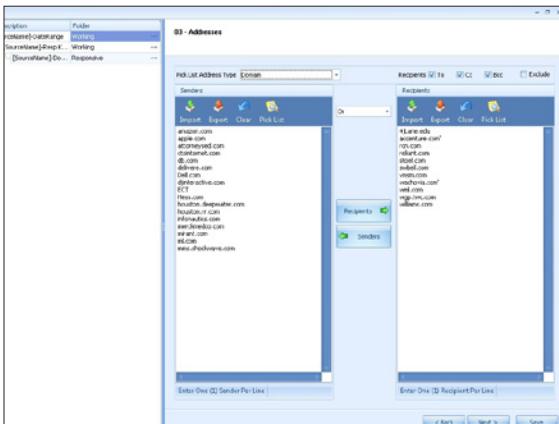

RELATIONSHIP ANALYZER

Viewpoint provides the capability to identify and group all e-mail communications by custodians or other e-mail participants by content, date filter or network domain.

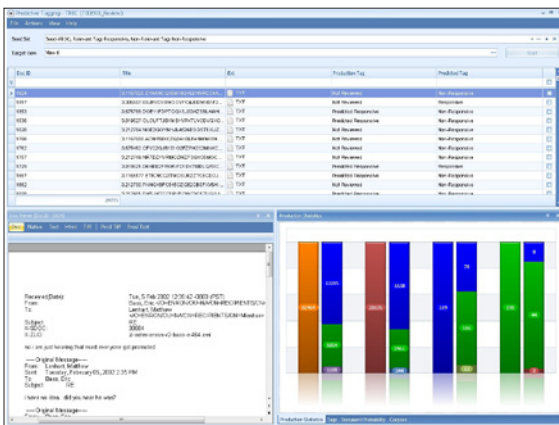

The visual interface allows the user to select custodians, domains and dates to better understand and analyze the communications within the time frames specified. Graphical objects representing each e-mail sender or recipient are displayed to simplify the presentation of complex information. A timeline is presented to allow users to graphically select the dates desired for analysis, identify gaps in the collection and show the frequency of communications among selected parties.

AUTOMATED WORKFLOW

Viewpoint™ Automation provides advanced, pre-defined workflows, automatic document batch creation, rules-based document routing to established experts and advanced check-in/out capabilities. Complicated culling workflows can be stored, reviewed and applied multiple times without the need to create separate instructions or manual processes outside of Viewpoint. The result is a consistent, stable and efficient method for managing millions of documents throughout the review process, effectively eliminating the need for human interaction at every juncture.

VIEWPOINT ASSISTED REVIEW

The Viewpoint Assisted Review module combines proven analytics and machine-learning techniques to assist your review team in achieving consistent, predictable decisions and document categorization. By “learning” the decisions made by your expert review team on the “seed set” of data, the assisted review workflow automatically analyzes the remaining documents and categorizes them based upon the decisions made by the human team. By combining user expertise and advanced technology of Viewpoint Assisted Review, document review is fast, efficient and consistent. As a result, significant cost savings are achieved.

VIEWPOINT ALL-INCLUSIVE PLATFORM

Because Viewpoint's architecture includes a complete e-Discovery platform, it is integrated with fully functional processing and production modules. There is no need for complex, time-consuming imports, exports or duplicative files transfers between disparate software products.

With Viewpoint, the next project phase is always just a right-click away to the next level. Fast. Efficient. Cost effective. Viewpoint – the power of one.
